Application No.: 10/759260

Case No.: 58372US004

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1. (currently amended) A retroreflective sleeve <u>provided on a traffic device wherein the device no longer meets a color standard or reflectivity standard, the sleeve for application to a support comprising a flexible substrate having a viewing surface and a non-viewing surface and at least one retroreflective band bonded to a flexible substrate wherein a portion of the flexible substrate is exposed on the viewing surface.</u>
- 2.(currently amended) The <u>retroreflective sleeve</u> method-of claim 1 wherein the flexible substrate is non-retroreflective.
- 3.(original) The retroreflective sleeve of claim 1 wherein the retroreflective band is at least as flexible as the flexible substrate.
- 4. (original) The retroreflective sleeve of claim 1 wherein the band has an elongation at break of at least 100% according to ASTM D 882.
- 5. (original) The retroreflective sleeve of claim 1 wherein the band has an elongation at break of at least 200% according to ASTM D 882.
- 6. (original) The retroreflective sleeve of claim 1 wherein the band has an elongation at break of at least 300% according to ASTM D 882.
- 7. (original) The retroreflective sleeve of claim 1 wherein the retroreflective band is substantially free of backing.
- 8. (original) The retroreflective sleeve of claim 7 wherein the retroreflective band consists essentially of microspheres at least partially embedded in a binder layer and specular or diffuse reflecting material.

Application No.: 10/759260

Case No.: 58372US004

- 9. (original) The retroreflective sleeve of claim 7 wherein the retroreflective band comprises a fabric backing.
- 10. (original) The retroreflective sleeve of claim 7 wherein the retroreflective band comprises an adhesive.
- 11. (original) The retroreflective sleeve of claim 10 wherein the adhesive is heat activated.
- 12. (original) The retroreflective sleeve of claim 1 wherein the substrate comprises a base arcuate edge and a top arcuate edge parallel to the base arcuate edge and a pair of side edges.
- 13. (original) The retroreflective sleeve of claim 12 wherein the retroreflective sleeve comprises at least two bands aligned substantially parallel with the base and top arcuate edges.
- 14. (original) The retroreflective sleeve of claim 12 wherein upon joining the side edges a conical shape is formed.
- 15. (original) The retroreflective sleeve of claim 14 wherein the conical shape comprises a single opening about the base arcuate edge.
- 16. (original) The retroreflective sleeve of claim 14 wherein the conical shape comprises a pair of openings about each arcuate edge forming a cone collar.
- 17. (original) The retroreflective sleeve of claim 16 wherein a first band shares a common edge with the base arcuate edge and a second band shares a common edge with the top arcuate edge and the fabric is exposed between the first and second bands.
- 18. (original) The retroreflective sleeve of claim 1 wherein the substrate is rectangular having two pairs of parallel edges.

Application No.: 10/759260

Case No.: 58372US004

- 19. (original) The retroreflective sleeve of claim 18 wherein upon joining one pair of edges a cylindrical shape is formed.
- 20. (original) The retroreflective sleeve of claim 1 wherein the flexible substrate is selected from fabric, mesh and film.
- 21. (original) The retroreflective sleeve of claim 1 further comprising a support selected from cones, drums, tubes, stakes, posts, coils, sign support, and traffic sign.
- 22. (original) The retroreflective sleeve of claim 21 wherein the support has a viewing surface and the sleeve covers a portion of the viewing surface of the support.
- 23. (original) The retroreflective sleeve of claim 21 wherein the support has a viewing surface and the sleeve covers substantially the entire viewing surface of the support.
- 24. (original) The retroreflective sleeve of claim 1 wherein the support is a color and the flexible substrate is the same color as the support.
- 25. (original) The retroreflective sleeve of claim 1 wherein the flexible substrate is a conspicuous color.
- 26. (original) The retroreflective sleeve of claim 25 wherein the substrate is a fluorescent color.
- 27. (original) An article comprising a support having a substantially continuous viewing surface and a non-retroreflective conspicuously colored sleeve substantially covering the viewing surface of the support.
- 28. (original) The retroreflective article of claim 27 wherein the retroreflective sleeve further comprises a retroreflective band.

Application No.: 10/759260 Case No.: 58372US004

29. (original) An article comprising a support and a non-retroreflective sleeve having a viewing surface comprising at least one of indicia, symbols, graphics, and combinations thereof.

- 30. (original) A roll-up sign comprising the sleeve of claim 1.
- 31.(withdrawn) A method of making a retroreflective sleeve comprising providing a flexible substrate that is triangular or rectangular in shape; providing at least one retroreflective band; and bonding the band to the flexible substrate.
- 32. (withdrawn) The method of claim 31 wherein the retroreflective band is a transfer film.
- 33. (withdrawn) The method of claim 31 wherein bonding is achieved by laminating the transfer film at a temperature ranging from about 150°C to 200°C.
- 34. The method of claim 31 wherein the retroreflective transfer film consists essentially of a multitude of microspheres at least partially embedded in a binder layer and associated specular or diffuse reflecting material.
- 35. (withdrawn) The method of claim 31 wherein the retroreflective band is substantially free of backing.
- 36. (withdrawn) A method of making a retroreflective sleeve comprising providing a flexible substrate; providing at least one retroreflective band; bonding the band to the flexible substrate forming a laminate; and forming the laminate into a triangular or rectangular shape.
